The Executioner Series Books 1–3 Sep 04 2020 Introducing “action adventure icon” Mack Bolan as he wages a one-man war against the Mafia—in the first three books of the million-selling series (*Los Angeles Times*). In the jungles of Southeast Asia, no sniper was more ruthless than Mack Bolan. After twelve years in-country, with ninety-five confirmed kills, the Special Forces sergeant returns to the United States only to find that his father has gone berserk, slaughtering his family before taking his own life. But Bolan knows his old man was no killer: He was under pressure from a gang of Mafia thugs who were after his money—and willing to destroy his life to get it. For the sake of his father, Bolan declares war on the men who drove him mad . . . Now in one volume, these are the first three action-packed novels in the long-running series that has sold more than 200 million copies. If you’re a fan of Rambo, James Bond, or Jack Reacher, it’s time to meet the one and only Mack Bolan—an elite operative with a haunted past pitted against legions of mobsters no one else can take down.

Linear Algebra Jun 01 2020 This book presents a concise, comprehensive introduction to the fundamentals of linear algebra. The authors develop the subject in a manner accessible to readers of varied backgrounds. The material requires only very basic algebra and a rudimentary knowledge of matrices and determinants as prerequisites, but the text includes an introductory chapter containing most of the foundational material required. Linear Algebra begins with the basic concepts of vector spaces, subspace, basis, and dimension. Although the authors emphasize finite dimensional

vector spaces, they also include examples of infinite dimensional vector spaces to highlight the differences between the two classes. The treatment then moves to the analysis of a single linear operator on a finite dimensional vector space, including discussions on characterizing diagonalizable and triangulable operators. It uses the concept of generalized eigenvectors to obtain an inductive procedure for constructing a Jordan basis for a triangulable linear operator and again uses an algorithmic approach to the rational canonical form. Subsequent discussions focus on finite dimensional inner product spaces and non-negative operators, isometries, and polar and singular-value decomposition. The final chapter explores bilinear forms and extends the results of inner product spaces to bilinear spaces. Numerous examples and exercises at the end of each section make this an outstanding text for graduate and senior undergraduate students.
