Workplace Monitoring and Technology Nov 06 2020 Workplace Monitoring and Technology aims to showcase results of research and explanatory theories that influence employees' acceptance of the fact that work is monitored using ICT-based monitoring tools. Work monitoring, understood as obtaining, storing and reporting the results of collected observations, has always been a managerial task. Traditionally it was carried out by supervisors who, while overseeing the work of employees, would draw conclusions from their observations and implement corrective actions. The use of information and communication technologies (ICT) to monitor the working employee and their performance has changed the methods of monitoring, and the popularization of remote work has increased interest in searching for new monitoring systems using the full potential of new ICT solutions. The new developments in ICT have caused smart monitoring systems and new solutions to evolve in electronic work monitoring based on the Internet of Things and Artificial Intelligence, which enables nearly cost-free monitoring. However, scientific knowledge about them is limited, and above all, so is managerial knowledge about the reception of these tools by

employees, while their misuse can cause considerable damage. Presenting a broad overview of the current state of different areas of scientific knowledge regarding smart and electronic monitoring systems of work performance, this book will be of relevance for academics within the fields of human resource management and performance management, and for similar groups of researchers in psychology and sociology.

Stage Management and Theatre Administration Dec 27 2019

[The Stage Management Handbook](#) Jun 25 2022 The stage manager is the renaissance man of the theater. He or she must have a working knowledge of how the various technical aspects of the theater work (scenery, props, costumes, lights and sound), be part director, part playwright, part designer and part producer, and be prepared to act as confidant, counselor and confessor to everyone else in the company. This book addresses all of these considerations in detail and offers the reader—professional or amateur, veteran or beginner—helpful guidance and practical advice, supported by many forms and examples to illustrate the points covered in the text. The three phases of mounting and performing a show are covered. Part I takes the reader through the pre-production phase—research, the script, planning and organization, and auditions. Part II covers the rehearsal process—rehearsal rules, blocking, cues, prompting, information distribution, technical and dress rehearsals. Part III discusses the performance phase—calling the show, maintaining the director's work, working with understudies and replacements, and more. Part IV provides insights into the organizational structure or

Many stage managers of long-running commercial productions believe that—once the show is up and running—only ten percent of their work is related to everything covered in Parts I, II and III. The other ninety percent is associated with issues in Part IV; i.e. "managing" human behavior and maintaining working relationships.

Value Chain Management in the Chemical Industry Feb 21 2022 Supply chain management helped companies to manage volumes, fulfil customer demand and optimize costs in production and distribution. Specifically, chemical industry companies with high complexity in production and distribution used supply chain management to steer their operations. Confronted with globalization and increasing raw material and sales price volatility, optimizing supply chain costs is no longer sufficient to ensure the overall profitability of the business. Value chain management takes supply chain management to the next level by integrating all volume and value decisions from sales to procurement. The book presents the value chain management concept and demonstrates how it is applied in a global value chain planning model for commodities in the chemical industry. The Classical Hollywood Cinema Oct 05 2020 'A dense, challenging and important book.' Philip French Observer 'At the very least, this blockbuster is probably the best single volume history of Hollywood we're likely to get for a very long time.' Paul Kerr City Limits 'Persuasively argued, the book is also packed with facts, figures and photographs.' Nigel Andrews Financial Times Acclaimed for their breakthrough approach, Bordwell, Staiger and Thompson analyze the basic conditions of American film-making as a historical institution and consider to what extent Hollywood film production constitutes a systematic enterprise, in both its style and its business operations. Despite differences of director, genre or studio, most Hollywood films operate within a set of shared assumptions about how a film should look and sound. Such assumptions are neither natural nor inevitable; but because classical-style films have been the type most widely seen, they have come to be accepted as the 'norm' of film-making and viewing. The authors show how these classical conventions were formulated and standardized, and how they responded to the arrival of sound, colour, widescreen ratios and stereophonic sound. They argue that each new technological development has served a function within an existing narrational system. The authors also examine how the Hollywood cinema standardized the film-making process itself. They describe how, over the course of its history, Hollywood developed distinct modes of production in a constant search for maximum efficiency, predictability and novelty. Set apart by its combination of theoretical analysis and empirical evidence, this book is the standard work on the classical Hollywood cinema style of film-making from the silent era to the 1960s. Now available in paperback, it is a 'must' for film students, lecturers and all those seriously interested in the

dying is changing our lives. Over the past five years, medical aid-in-dying (also known as assisted suicide) has expanded rapidly in the United States and is now legally available to one in five Americans. This growing social and political movement heralds the possibility of a new era of choice in dying. Yet very little is publicly known about how medical aid-in-dying laws affect ordinary citizens once they are put into practice. Sociological studies of new health policies have repeatedly demonstrated that the realities often fall short of advocacy visions, raising questions about how much choice and control aid-in-dying actually affords. *Scripting Death* chronicles two years of ethnographic research documenting the implementation of Vermont's 2013 Patient Choice and Control at End of Life Act. Author Mara Buchbinder weaves together stories collected from patients, caregivers, health care providers, activists, and legislators to illustrate how they navigate aid-in-dying as a new medical frontier in the aftermath of legalization. *Scripting Death* explains how medical aid-in-dying works, what motivates people to pursue it, and ultimately, why upholding the "right to die" is very different from ensuring access to this life-ending procedure. This unprecedented, in-depth account uses the case of assisted death as an entry point into ongoing cultural conversations about the changing landscape of death and dying in the United States.
