The Evolution of College English Jul 28 2022 Thomas P. Miller defines college English studies as literacy studies and examines how it has evolved in tandem with broader developments in literacy and the literate. He maps out “four corners” of English departments: literature, language studies, teacher education, and writing studies. Miller identifies their development with broader changes in the technologies and economies of literacy that have redefined what students write and read, which careers they enter, and how literature represents their experiences and aspirations. Miller locates the origins of college English studies in the colonial transition from a religious to an oratorical conception of literature. A belletristic model of literature emerged in the nineteenth century in response to the spread of the “penny” press and state-mandated schooling. Since literary studies became a common school subject, professors of literature have distanced themselves from teachers of literacy. In the Progressive era, that

distinction came to structure scholarly organizations such as the MLA, while NCTE was established to develop more broadly based teacher coalitions. In the twentieth century New Criticism came to provide the operating assumptions for the rise of English departments, until those assumptions became critically overloaded with the crash of majors and jobs that began in 1970s and continues today. For models that will help the discipline respond to such challenges, Miller looks to comprehensive departments of English that value studies of teaching, writing, and language as well as literature. According to Miller, departments in more broadly based institutions have the potential to redress the historical alienation of English departments from their institutional base in work with literacy. Such departments have a potentially quite expansive articulation apparatus. Many are engaged with writing at work in public life, with schools and public agencies, with access issues, and with media, ethnic, and cultural studies. With the privatization of higher education, such pragmatic engagements become vital to sustaining a civic vision of English studies and the humanities generally.

College English: Composition Dec 21 2021 COLLEGE

ENGLISH: COMPOSITION is a guide for those who must take a college composition class—and everyone else interested in the ability to write at a college level. In contrast with other books on the subject, it emphasizes thinking and reading skills over rhetorical and stylistic formulas and rules, and boils these down to the very basics. There are no lists and tables of things to memorize, no jargon, no Greek and Latin. Instead this book offers the essentials, spelled out in the clearest way possible, and illustrated with suitable examples, with the whole organized around easy-to-peruse questions and answers like "What is a Thesis?"—the very questions students, and everyone else, need answered if they are to succeed.

Posthumanism and the Digital University Mar 31 2020 It is a commonplace in educational policy and theory to claim that digital technology has 'transformed' the university, the nature of learning and even the essence of what it means to be a scholar or a student. However, these claims have not always been based on strong research evidence. What are students and scholars actually doing in the day-to-day life of the digital university? This book examines in detail how the world of the digital interacts with texts, artefacts, devices and humans, in the contemporary university setting. Weaving together perspectives from a range of thinkers and disciplinary sources, Lesley Gourlay draws on ideas from posthuman and new materialist theory in particular, to open up our understanding about how digital knowledge practices operate. She proposes that digital engagement in the university should not be regarded as 'virtual' or disembodied, but instead may be understood as a complex set of entanglements of the body, texts and material artefacts, making a case that agency and the ways in which knowledge emerges should be regarded as 'more than human'.

Five Years in an English University Jan 28 2020

The Formation of College English Oct 19 2021 In the middle of the eighteenth century, English literature, composition, and rhetoric were introduced almost simultaneously into colleges throughout the British cultural provinces. Professorships of rhetoric and belles lettres were established just as print was reaching a growing reading public and efforts were being made to standardize educated taste and usage. The provinces saw English studies as a means to upward social mobility through cultural assimilation. In the educational centers of England,

however, the introduction of English represented a literacy crisis brought on by provincial institutions that had failed to maintain classical texts and learned languages. Today, as rhetoric and composition have become reestablished in the humanities in American colleges, English studies are being broadly transformed by cultural studies, community literacies, and political controversies. Once again, English departments that are primarily departments of literature see these basic writing courses as a sign of a literacy crisis that is undermining the classics of literature. The Formation of College English reexamines the civic concerns of rhetoric and the politics that have shaped and continue to shape college English.

Working together, these teachers and students are constantly articulating new social and political conditions and meanings outside and inside given discourses and traditions of ELT. The book's main argument is that these multiple stakeholders must be given a more prominent role in shaping policy and curriculum at universities and other English language contexts around the world.

approaches the English language not as a conventional linguist, but as a poet interested in the spirit and evolution of our language. To show "how sound works in English and American poetry," the author traces the many changes, both subtle and radical, in how English has sounded over the past thirteen centuries, while also showing how those changes are related to the evolution of human consciousness in Western, English-speaking peoples. The Spirit of the English Language is never dry but filled with the textures of the lives and works of the great English-language poets. Anglo-Saxon in Beowulf and the later works of Chaucer, and following the spirit of the English language through to the nineteenth century's "primal/modern" language of Gerard Manley Hopkins and Dickinson's diamond-distilled language. Along the way, we discover how the very sounds of English have changed the ways in which not only poets think and express themselves, but, more important, how sound works and changes our human consciousness. The author also discusses specifically how, in teaching poetics, stages of the developing English language quicken corresponding stages of thinking in maturing adolescents. Twelve years in the making, *The Spirit of the English Language* is the fruit of John Wulsin's thirty years of teaching language and literature to adolescents. The book is further informed and fructified by the author's fifteen years of teaching poetics to adults, as well as decades of writing poetry and participating in numerous poetry workshops. This practical guide will become a classic for all poets, teachers of poetry and language, and students. It is a truly valuable resource for anyone interested in English, its development, its effects on consciousness, and how sound works in poetry.
